

Two functional requirements and two non-functional requirements for this project

For the appointment scheduling feature of this project. - ASK ME APP. Below are the functional and non- functional requirements:

Functional Requirements:

1. Users must be able to view available or given appointment slots in real-time.
2. The system should allow users to book, reschedule, and cancel already scheduled appointments.

Non-Functional Requirements:

1. The scheduling system must ensure high availability, especially during peak usage times.
2. Appointment data must be securely stored and protected.

Two user stories of your project.

1. As a patient, I want to book and view appointments based on the availability of mental health experts to plan my consultations.
2. As a health professional, I need to manage my availability on the platform so that patients can book appointments according to my schedule as shown on the app.

case diagram for your project.
